

## HJS-1570+ Eco-Friendly Resin

### 【Description】

HJS-1570+ is an acrylic copolymer emulsion (core-shell structure starch-based) that featured grease-proof and chemical resistance. Its good leveling and drying rate can improve paper strength and paper folding endurance. The emulsion is glycol-free, extremely low VOC, HAPS-free and slight odor.

### 【Features】

- Low VOC
- Glycol-free
- Excellent grease-proof and chemical resistance
- Good compatibility
- Printability
- Hard texture after film formation
- Stable property in freezing and thawing
- Good tensile strength after film formation and dried.

### 【Specification】

- White emulsion
- Solid content(%) : 49.7±1
- pH (25°C) : 5.5±1
- Density(g/cm<sup>3</sup>) : 1±0.05 @20°C
- Viscosity(25°C) : 30-200cps
- Min. film formation temperature<5°C
- Solidification temperature: 60°C

### 【Application】

1. HJS-1570+ suits for applying on food wrapping paper or porous materials as filler. The coated paper is with excellent grease-resistant and good air permeability, especially used in fast food and cooked food package, the food will not be simmered and swelled.
2. The dose rate of 3-5 g/square meter(dried film) on paper can form an effective grease-proof film suitable for applying to various packing materials. (The actual value will vary depending on different paper and physical property requirements)
3. Stored in a cool place with well-sealed condition, the quality can be guaranteed for 12 months.

The above values are for reference only and subject to the report along with the shipment.
